

## Care and Maintenance

The care and maintenance of your DiFlex II™ roof is simple and requires no special materials.

- A. Semi-annual inspection of the roof is suggested. Check the membrane for possible damage and check the lap sealant used in all termination areas and around all accessories and fasteners. The lap sealant has a limited life span, depending on the geographic region and conditions, and should be repaired or replaced as needed.
- B. Keep your roof clean. For normal cleaning, use Dicor Roof Cleaners (RP-RC320S spray or RP-RC160C concentrate) or standard products such as 409, Fantastic or mild detergent are sufficient. Do not use harsh abrasives or products containing solvents. For stubborn stains, a rag dampened with mineral spirits is recommended. **DO NOT SOAK. (Do not apply mineral spirits directly to roof).**
- C. When cleaning, rinse thoroughly with clean water to avoid residue build-up on the roof or sidewall of the vehicle.
- D. Parking in areas where fruit or tree sap may stay on the roof for extended periods of time may result in unremovable stains.

Dicor's Di Flex II™ TPO roofing membrane is specially formulated for exposure to the sun and natural elements. However, it can be cut or punctured by sharp objects. Use caution when placing any articles or walking on roof. If damage does occur, the membrane can easily be patched. Contact your local dealer or Dicor for additional information.

Use caution when walking on a roof covered with DiFlex II™ TPO membrane. The surface may be slippery when damp or wet.
